SAMPLE PROPOSAL

Proposal for an E-Waste Collection and Awareness Drive on Campus

Submitted to: Head of Department / Principal

Prepared by: First-Year B.Tech Students

Proposed Duration: 4 Weeks

1. Introduction

Electronic waste such as damaged chargers, earphones, cables, keyboards, batteries and old electronic devices is increasingly generated by students. If such waste is mixed with regular waste, it can create environmental and health concerns. This proposal suggests organizing an e-waste collection and awareness drive on campus to encourage responsible disposal and recycling.

2. Problem Statement

There is currently no dedicated and easily accessible collection system for small electronic waste generated by students and staff. As a result, e-waste may be stored unnecessarily or disposed of with general waste.

3. Objectives

• Create awareness among students about responsible e-waste disposal.

• Provide a designated collection point for e-waste on campus.

• Encourage students to reduce, reuse and recycle electronic items.

• Ensure collected e-waste is handed over to an authorized recycling agency.

4. Proposed Plan

The drive will be conducted in four stages. During Week 1, posters and classroom announcements will be used to create awareness. During Weeks 2 and 3, collection boxes will be placed at selected campus locations. Students will be encouraged to deposit eligible small electronic items. During Week 4, the collected material will be sorted and handed over through an appropriate authorized recycling channel. A short awareness session will also be conducted for students.

5. Resources Required

Resource	Purpose
Collection boxes	Collection of small e-waste items
Posters / notices	Student awareness
Gloves and labels	Safe handling and identification
Volunteers	Collection, recording and coordination
Digital/printed certificates	Recognition of volunteers

6. Estimated Budget

Item	Estimated Cost (■)
Collection boxes and labels	1,500
Posters and awareness material	1,000
Gloves and basic handling supplies	500

Miscellaneous expenses	1,000
Total	**4,000**

7. Timeline

Week	Activity
Week 1	Awareness campaign and volunteer registration
Week 2	Install collection points and begin collection
Week 3	Continue collection and conduct awareness session
Week 4	Sorting, documentation and recycling handover

8. Expected Outcomes

• Increased awareness of e-waste management among students.

• Collection of unwanted electronic items through a structured system.

• Improved understanding of recycling and responsible disposal.

• Development of student participation and teamwork skills.

9. Conclusion

The proposed E-Waste Collection and Awareness Drive is a practical campus initiative that can involve students while addressing an important environmental issue. Approval and basic institutional support are requested to conduct the programme successfully.
