SAMPLE PROPOSAL

Proposal for a Campus Food Waste Management and Composting Drive

Submitted to: Head of Department/Principal
Prepared by: Saksham Bhudhar, First-Year B.Tech Bioengineering
PRN: 26043010135
Proposed Duration: 4 Weeks

1. Introduction

Organic food waste, including leftover meals, vegetable peels, and biodegradable food packaging, is generated daily in campus canteens and mess halls by students and staff. When discarded with general trash, food waste ends up in landfills, producing harmful greenhouse gases. This proposal outlines a practical campus food waste management and composting drive to foster environmental responsibility and resource recovery.

2. Problem Statement

Currently, the campus lacks a dedicated and systematic segregation process for organic wet waste. As a result, food leftovers are mixed with non-biodegradable waste, leading to unhygienic conditions and wasted opportunities for nutrient recycling. A structured food waste collection and composting initiative provides a clean, sustainable solution.

3. Objectives

- To create awareness among students regarding food waste reduction and segregation.
- To establish designated wet waste collection points near campus canteens and mess areas.
- To introduce basic aerobic composting for converting food waste into rich soil manure.
- To encourage student participation in sustainable waste management and eco-friendly practices.

4. Proposed Plan

The drive will be conducted in four stages. During Week 1, informative posters and brief canteen announcements will create awareness and register student volunteers. During Weeks 2 and 3, dedicated green collection bins will be installed near food outlets, and daily waste collection will be monitored. During Week 4, collected organic waste will be processed in compost pits, documented, and a summary session on sustainable habits will be conducted.

5. Resources Required

Aerobic composting bins and labeled collection buckets will be placed at food hubs. Posters, flyers, and digital banners will inform students about proper segregation. Gloves, scoops, and bio-enzyme starters will support hygienic waste handling. Student volunteers will coordinate daily collection, maintain records, and guide peers.

6. Estimated Budget

An estimated budget of 4,000 is proposed for the drive. The actual expenses may vary depending on the materials available on campus and any support provided by the college.

Item	Estimated Cost
Collection boxes and labels	1,500
Posters and awareness material	1,000
Gloves and basic handling supplies	500
Miscellaneous expenses	1,000
Total	**4,000**

7. Timeline

Week	Activity
Week 1	Awareness campaign and volunteer registration
Week 2	Install collection points and begin collection
Week 3	Continue collection and conduct awareness session
Week 4	Sorting, documentation and recycling handover

8. Expected Outcomes

- Increased awareness of organic food waste reduction among students and staff.
- Systematic collection and segregation of campus canteen organic waste.
- Improved understanding of natural composting and soil nutrient restoration.
- Development of student participation, leadership, and teamwork skills.

9. Conclusion

The proposed Campus Food Waste Management and Composting Drive is a practical campus initiative that can involve students while addressing an important environmental issue. Approval and basic institutional support are requested to conduct the programme successfully.
